

SYED MUHAMMAD HAMZAH RIZVI

AI Enablement Specialist

Manchester, UK | 07478 631940 | hamzahrizvi2@gmail.com | linkedin.com/in/hamzah-rizvi | github.com/hamzahrizvi | hamzahrizvi.github.io

PROFESSIONAL SUMMARY

Applied AI engineer with 3+ years building AI and biometric products and, in parallel, training the colleagues and stakeholders who use them. Has delivered 10+ training sessions to groups of 30+ and authored 30+ internal guides and troubleshooting resources used across support and engineering teams. Builds and demonstrates modern generative AI tools first-hand — including a self-built RAG assistant now serving 300+ customer accounts weekly — then teaches others how and when to use them, with an honest view of where AI genuinely adds value and where it doesn't. Designs and delivers PowerPoint-based training sessions and hands-on walkthroughs for both technical and non-technical audiences, works independently in ambiguous environments, and travels to support in-person adoption.

CORE SKILLS

- **Training & Enablement:** Designing and delivering PowerPoint-based training sessions, hands-on product walkthroughs, internal documentation and guidance materials, stakeholder-facing presentations, adoption support.
- **Applied AI:** LLMs, RAG, prompt design and prompt engineering guidance, agentic workflows, model evaluation, practical hands-on use of ChatGPT, Claude and other generative AI tools.
- **Tool Evaluation:** Hands-on testing and business-relevance assessment of AI tools, gathering structured user feedback, translating technical capability into business use cases.
- **Engineering:** Python, C++, FastAPI, REST APIs, webhooks, authentication flows, Docker, Git.
- **Communication:** Bridging technical and non-technical audiences, flexing communication style for senior stakeholders, first-line support and troubleshooting.

PROFESSIONAL EXPERIENCE

Technical Software Consultant — Innovative Technology, Manchester, UK

Mar 2023 – Present

- Deliver structured internal training sessions using PowerPoint and live demonstrations to colleagues and stakeholders on existing biometric and identity-verification products, covering functionality, best-practice usage and troubleshooting.
- Design and present training content for newly built internal AI tools and projects, including a self-developed RAG-based knowledge assistant, translating technical capability into practical, adoptable workflows for non-technical colleagues.
- Act as first-line technical support and go-to resource for colleagues and stakeholders adopting new products, answering queries and troubleshooting issues directly.
- Run discovery and workshop sessions with business and technical stakeholders to map workflows and identify where AI and automation can create measurable value.
- Produce clear internal documentation, integration guides and training materials that support adoption and reduce repeat questions across teams.
- Travel to support international customer deployments across retail, gaming and compliance-focused environments spanning thousands of operational endpoints.
- Design and build REST API integrations, webhooks and automation flows, using AI coding assistants daily and forming a grounded, practical view of where AI genuinely speeds up work.

Automation Engineer — Tripack Films Ltd., Pakistan

Mar 2020 – Sep 2021

- Trained technicians in structured fault diagnosis for industrial control systems, improving internal resolution times and building in-house repair capability.

Software Consultant — Evolligence, Pakistan

Dec 2019 – Mar 2020

- Built and supported backend application logic using structured APIs and data-driven workflows, collaborating with development teams on delivery.

SELECTED AI PROJECTS

GroundedOps — Production RAG Support Assistant — Python, FastAPI, React, ChromaDB, Ollama, Docker, DeepSeek/OpenAI/Claude APIs

- Deployed to production and now serving 300+ customer accounts weekly through a public embeddable widget and admin console; associated with a 40% reduction in first-line ticket volume and a 55% reduction in resolution time per internal Jira metrics since release (tracked alongside other concurrent initiatives, so not isolated to this tool alone).

- Designed, built and presented a retrieval-augmented QA assistant using hybrid retrieval, reranking and grounding checks to reduce hallucination — then trained colleagues on how to use it and where its answers could and couldn't be trusted.
- Built a 140+ test regression suite enabling fast, evidence-driven iteration, and used the project as a live case study in internal AI training sessions.

Age Estimation & Demographic Analysis — *TensorFlow/Keras, EfficientNetB0, VGG16*

- Built a hierarchical multi-task EfficientNetB0 pipeline (gender, coarse age, fine age and continuous age regression) on 274k+ facial images from WIKI/IMDB, fine-tuned on UTKFace, with GPU-accelerated training and evaluation tooling; achieved 87.5% gender accuracy, 88.4% coarse-age accuracy, 92.6% near-group (± 1) accuracy and 8.52-year MAE.

EDUCATION

MSc Robotics and Automation (Minor in AI) — University of Salford, UK

2021 – 2022

Graduated with Distinction. Dissertation: facial age and gender estimation using CNNs.

BEng Electrical Engineering — NUST, Pakistan

2015 – 2019

Focus: computer vision, machine learning and robotics.
