

SYED MUHAMMAD HAMZAH RIZVI

Technical Support Engineer

Manchester, UK | 07478 631940 | hamzahrizvi2@gmail.com | linkedin.com/in/hamzah-rizvi | github.com/hamzahrizvi | hamzahrizvi.github.io

PROFESSIONAL SUMMARY

Technical support engineer with 3+ years handling escalated customer issues in API-driven B2B software across up to 15 concurrent international deployments spanning 10+ countries, partnering closely with engineering to diagnose, triage and resolve production problems. Built and shipped an internal AI-powered knowledge base and support assistant now serving 300+ customer accounts weekly, backed by a 140+ test regression suite and a 34-case evaluation harness — associated with a 40% reduction in first-line ticket volume and a 55% reduction in resolution time per internal Jira metrics (tracked alongside other concurrent initiatives). Authored 30+ internal troubleshooting guides, writes scripts and internal tools against REST APIs, and is functional in SQL. Consistently focused on fixing the underlying system and feeding recurring patterns back to product, not just closing the ticket at hand.

CORE SKILLS

- **Technical Support & Escalations:** Customer escalation ownership via ticketing systems, root-cause diagnosis, bug triage, internal observability tooling, distinguishing configuration vs. environment vs. product issues.
- **Engineering & Tooling:** Python, C++, FastAPI, REST API integration and debugging, webhooks, authentication flows, SQL (intermediate, personal projects), JSON, Docker, Git.
- **Knowledge Base & Internal Tools:** Designing and building internal AI-powered tools and knowledge bases, technical documentation, self-serve troubleshooting resources, workflow automation.
- **Communication & Collaboration:** Providing technical guidance to developers on API integration and best practices, partnering with engineering and product teams, clear written and verbal communication across technical and non-technical audiences.

PROFESSIONAL EXPERIENCE

Technical Software Consultant — Innovative Technology, Manchester, UK

Mar 2023 – Present

- Own escalated customer issues end-to-end for AI-powered identity-verification products, using internal logs and observability tooling to diagnose and scope issues before escalating to engineering with clear, context-rich reports.
- Provide technical guidance to customer developers and technical contacts on REST API integration, authentication flows and best-practice usage, across up to 15 concurrent international deployments.
- Designed, built and shipped GroundedOps, an internal AI-powered knowledge base and support assistant, now serving 300+ customer accounts weekly via a public embeddable widget and admin console — associated with a 40% reduction in first-line ticket volume and 55% reduction in resolution time per internal Jira metrics (tracked alongside other concurrent initiatives).
- Backed the knowledge assistant with a 140+ test regression suite covering diagnosed bugs by name, plus a 34-case evaluation harness gating every change before release.
- Capture recurring customer issues and feature requests, feeding structured feedback back to product and engineering to influence roadmap priorities.
- Author 30+ internal integration guides and troubleshooting resources, reducing repeat support load and helping customers and colleagues self-serve.
- Use AI-assisted development tools daily to build internal scripts and tooling against REST APIs, validating output against reproduced behaviour rather than accepting it blindly.

Automation Engineer — Tripack Films Ltd., Pakistan

Mar 2020 – Sep 2021

- Diagnosed and resolved hardware and software issues in real-time industrial operational environments, working directly with control systems and sensor integrations.

Software Consultant — Evolligence, Pakistan

Dec 2019 – Mar 2020

- Built and supported backend application logic using structured APIs and data-driven workflows, collaborating with development teams on delivery.

SELECTED PROJECTS

GroundedOps — RAG Support Assistant & Knowledge Base — *Python, FastAPI, Docker, ChromaDB, SQL*

- Designed, built and deployed a production retrieval-augmented support assistant and knowledge base from scratch using hybrid retrieval, sigmoid-calibrated cross-encoder reranking and NLI-based grounding checks to suppress hallucinated answers — now serving 300+ customer accounts weekly.
- Diagnosed and fixed a silent correctness failure in the hallucination-detection gate; corrected class indexing took a true/false claim battery from three wrong verdicts to 8/8.
- Wrote a pure-stdlib regression suite of 140+ tests covering each diagnosed bug by name, plus an eval harness gating every change against 34 real test cases — enabling fast iteration without running model inference on every change.
- Associated with a 40% reduction in first-line ticket volume and 55% reduction in resolution time per internal Jira metrics since release (measured alongside other concurrent initiatives).

EDUCATION

MSc Robotics and Automation (Minor in AI) — University of Salford, UK

2021 – 2022

Graduated with Distinction.

BEng Electrical Engineering — NUST, Pakistan

2015 – 2019

Focus: computer vision, machine learning and robotics.
